

# PEEL AWAY<sup>®</sup>

## PAINT REMOVAL SYSTEM

### NEUTRALISER

APPLY TO SURFACES AFTER USING PEEL AWAY 1 ONLY

**\* Do not use neutraliser on metal surfaces.**

- 1) ALL SURFACES MUST BE THOROUGHLY WASHED WITH WATER.
- 2) PEEL AWAY 1 is an Alkaline stripper. After removal of the laminated paper sheets, paint, paste, the surface is left with a residue.
- 3) This loose and softened residue needs to be removed with damp sponges and contained.
- 4) Lightly wet the surface, using a nylon brush or broom, scrub the surface to remove any excess residue.
- 5) Thoroughly rinse the surface with water using sponges for interior. A hose, light pressure cleaner or steam cleaner for exterior. Some porous surfaces like wood may need to be washed more than once.
- 6) After the surface has dried for 24hrs, the surface **must be NEUTRALISED** to return the surface to a neutral pH. The PEEL AWAY Neutraliser concentrate (acetic acid) is used for this purpose.
- 7) Dilute the Neutraliser in the ratio of 1 part Neutraliser to 2 parts water. Apply neutraliser mix and leave on for six to eight hours. Rinse off with plain water. On wood if a dry white powder appears, dry brush and re-neutralise.

#### **Tips:**

- Prior to PAINTING OR RECOATING surfaces should always be dry and pH test should be done on the surfaces if uncertain.
- On porous surfaces like certain woods, moisture can take a long time to dry out, sometimes up to 60 days.
- Always use a good quality sealer/binder under coat.

#### **Technical:**

Every care is taken in preparation of this information. Recommendation of technical advice, verbal or trials is given with no responsibility or warranty. Every site condition is different and tests are highly recommended.
